Recommended Citation

This Project is brought to you for free and open access by the Student Research & Creative Work at Digital Commons @ Otterbein. It has been accepted for inclusion in Nursing Student Class Projects (Formerly MSN) by an authorized administrator of Digital Commons @ Otterbein. For more information, please contact Whybrew1@otterbein.edu.
Multiple Sclerosis Pathophysiology

Carolyln M. Ricketts, BSN, RN-C
Otterbein University, Westerville, Ohio

Pathophysiology Continued

Human CLC112 gene and cytokines: may be responsible for causing cardiovascular, gastrointestinal, cardiovascular,ogenic, neurogenesis, neurodegeneration

Multiple sclerosis (MS) is an autoimmune inflammatory disease that affects the central nervous system (CNS), blood-brain barrier (BBB), blood vessel disease and the brain spinal white matter leading to lesions and permanent disability (McCance, K. L., & Huether, S. E. (eds.)., 2018, p. 581).

Recurrent attacks and disability progression are common in MS.

The pathophysiology is important for the FNP role is important in assisting with diagnosis & life management of MS patients.

The FNP has an important role in screening patients, making referrals to correct medical providers, educating and counseling patients on ways to improve quality of life.

FNP role is important in assisting with diagnosis & life management of MS patients.

The FNP has an important role in screening patients, making referrals to correct medical providers, educating and counseling patients on ways to improve quality of life.
